

Multithreading en C++

Headers

```
<thread>, <mutex>, <atomic>, <condition_variable>
```

Crear un hilo

```
#include <thread>
```

```
void f() {}
```

```
int main() {  
    std::thread t(f);  
    t.join();  
}
```

Lambda

```
std::thread t([](){  
    // codigo  
});
```

Mutex

```
std::mutex m;  
m.lock();  
m.unlock();
```

Lock guard

```
std::lock_guard<std::mutex> g(m);
```

Atomic

```
std::atomic<int> x{0};  
x++;
```

Condition Variable

```
std::condition_variable cv;  
cv.wait(lock);  
cv.notify_one();
```
