

Multithreading en Python

Módulo

```
threading
```

Thread básico

```
import threading
```

```
def f():  
    pass
```

```
t = threading.Thread(target=f)  
t.start()  
t.join()
```

Lock

```
lock = threading.Lock()  
with lock:  
    pass
```

GIL

- Solo un hilo ejecuta bytecode
- CPU-bound: usar multiprocessing

Daemon

```
t.daemon = True
```
